

The Clean Air Task Force released a study on ozone production.

http://catf.us/resources/publications/files/Gasping_for_Breath.pdf

Ozone is produced from fugitive VOCs and methane. Ozone causes asthma.

Look at the map ES-1: there are 5,000-15,000 cases of asthma in the Buffalo-Niagara region.

Map 3: Children in WNY: 101-200 per 10,000 children asthma attacks.

Map 8: counties in WNY along the PA border have the highest VOC emissions anywhere in NY State. That's the location of National Fuels underground gas storage.

Appendix A: In NY State, 21,080 children suffer asthma attacks causing 15,350 lost school days.

The Northern Access Project will add to these figures.
