(express your concerns about climate change and the need for NY to transition to renewable energy here)

I request that NYSDEC not issue the permit for this pipeline project until the impact on climate change and compliance with New York's 2019 climate law, the Climate Leadership and Community Protection Act (CLCPA) are assessed.

Building new gas pipelines will lock us into decades of fossil fuel usage at a time when NYS is striving to be a leader on climate change. The CLCPA requires that we reduce our greenhouse gas emissions 40% of 1990 levels by 2030 and 85% by 2050. How will these goals be met if NYSDEC allows projects that don't comply with this law?

Have renewable energy alternatives such as energy efficiency and heat pumps been considered?

Thank you for your consideration,

Sincerely,
